

Acf'2i Delivers Epygi Telephony System for Alfred Merlin Scientific Research Vessel

Alfred Merlin is an all-composite new generation scientific vessel ordered by DRASSM (Département des recherches archéologiques subaquatiques et sous-marines), the archaeological and sub-marine research department of the French Ministry of Culture. Acf2i recommended and installed the Epygi solution as a robust internal telephone system coupled with a satellite internet connection for external calls. The purpose of the vessel is to do all the initial research in deep seas before the deployment of submarine fiber optics cables or oil pipes.

Epygi As the Best Choice

DRASSM searched for the best in the unified VoIP telecommunication systems which could be resistant to brutal movement of the vessel and harsh usage of the crew. They selected to work with Acf2i, Epygi's value-added Integrator, because of their long experience deploying Epygi's feature-rich IP PBXs and gateways in France and Africa. For more than 10 years Acf2i has been providing their customers with Epygi solutions and has successfully completed numerous Epygi based installations.

For Alfred Merlin Acf2i installed a QX50 IPBX with 12 Depaepe HD 2000 SIP robust phones. The satellite connection was provided by Iridium and an analog line was used to connect an FXO port of QX to the satellite modem.

The installation was basic and perfectly met the client's requirements.

About Acf2i

Located in Marseille, France, Acf2i is one of the oldest resellers and integrators of Epygi solution in France and Africa. Since 2006 Acf2i is the main training center of Epygi in Western Europe.
