

QXE1T1

The QXE1T1 Gateway features 30 channels (E1) or 24 channels (T1) of voice and conforms to a wide variety of signaling protocols. The primary function of this system is to bridge traditional E1 or T1 trunking from the PSTN to a QX IP PBX. Alternatively, it can connect legacy PBXs to the Internet to take advantage of cost-saving SIP trunks. The QXE1T1 has VPN capability and an Auto Attendant with standard and customizable scenarios. Integrating this product with any QX IP PBX allows the Gateway to then be managed through the IP PBX’s GUI.
